

## CLAIMS

What is claimed is:

1. A Necktie Knot Simulator comprising:

(a) a one piece shell member having an inverted triangular truncated front surface, a left side wall, a right side wall, a horizontal top wall, three rear surface panels, two side apertures located at the upper end of each said side wall and separated by said horizontal top wall, a bottom aperture located at the lower end of each said side wall, and

(b) said side wall apertures are separated a sufficient distance to ensure said side wall apertures and a necktie exiting each said side wall aperture will be covered by a collar of a wearers shirt, and

(c) side apertures and said bottom aperture will be of sufficient diameter and length to provide frictional resistance, and

(d) the rear of the knot simulator will generally be open to facilitate passing the necktie through said apertures.

2. The Necktie Knot Simulator of claim 1, wherein the inverted triangular truncated front surface comprises a decorative surface which may be composed of precious or semi-precious stones, engravings, logos, and the like.
